

*Weekly Coal Production* provides timely information on coal: current statistics on the production of anthracite, bituminous coal, and lignite are provided each week; monthly, quarterly, and annual statistics on coal consumption, production, stocks, imports, and exports, and related supply and demand data are provided as they become available.

*Weekly Coal Production* is intended for use by the coal industry, the press, State and Federal Governments, policy makers, consumers, and analysts. Weekly coal production estimates are based on current trends in weekly rail carloadings of coal and current coal production trends as reported in *Coal Distribution* (Form EIA-6), monthly and quarterly coal production reports from State mine agencies, and *Coal Production Annual* (Form EIA-7a).

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or necessarily reflecting any policy position of the Department of Energy or any other organization.

# Weekly Coal Production

**Energy Information Administration**  
Washington, D.C.

Production for Week Ended:  
December 3, 1983

Released for Printing:  
December 9, 1983

## Highlights

Production of bituminous coal and lignite in the week ended December 3, 1983, as estimated by the Energy Information Administration, was 15,938,000 short tons. This was an increase of 3,147,000 short tons, or 24.6 percent from production in the previous week. Production in the corresponding week of 1982 was 14,557,000 short tons. Bituminous coal and lignite production from January 1 through December 3, 1983 totaled 718,318,000 short tons, 8.0 percent below production in the same period of 1982. Weekly coal production in November continued to reflect the increase in electric utility demand for coal in recent months. Bituminous coal and lignite production in November 1983 totaled 69,524,000 short tons, an increase of 9.2 percent over production of 63,682,000 short tons in November 1982.

Production of Pennsylvania anthracite in the week ended December 3, 1983, as estimated by the Energy Information Administration, was 94,000 short tons, an increase of 19,000 short tons or 25.3 percent from production in the previous week. Production in the corresponding week of 1982 was 87,000 short tons. Anthracite production from January 1 through December 3, 1983 totaled 4,224,000 short tons, 0.2 percent below production in the same period of 1982.
